Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 03-12-04 has been entered.

Claim Rejections - 35 USC § 112

- 2. The following is a quotation of the first paragraph of 35 U.S.C. 112:
 - The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
- 3. Claims 27-34 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Specifically, new claim 27 recites the term "non-air" and the limitation that the light conducting medium is a "solid" micro optical fiber. Similarly, new claim 32 also recites the term "non-air." These newly recited limitations are not supported by the originally filed specification and are therefore new matter.

Claim Rejections - 35 USC § 103

Art Unit: 1743

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 6. Claims 27-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Curry in view of Pugh, and further in view of Wang et al.

The combination of Curry, modified in view of Pugh, is relied upon here in the same manner detailed in paragraph 3 of the last Office action. The device taught by Curry and Pugh differs from the claimed invention in that it fails to specify the optical fiber being "non-air" or "solid". However, such solid optical fibers were well known in the art of opto-chemical sensors as evidenced by Wang et al (see column 4, first full paragraph). It would have been obvious to one of ordinary skill in the art to utilize a conventional solid optical fiber for light transmission in the device of Curry in order to provide the necessary optical characteristics while minimizing cost and enhancing durability of the fiber.

Art Unit: 1743

Response to Arguments

7. Applicant's arguments filed 03-12-04 have been fully considered but they are not persuasive.

- (1) Applicant argues that the multi-layered cladding of Curry is not required by the instant invention. However, the additional features are not precluded by the instant claims.
- (2) Applicant argues that the device of Curry employs fluorescent dyes rather than applicant's "regular" dyes. However, it is noted that the instant claims do not recite any form of dyes at all. Rather, the claims require only "chemicals and enzymes", both of which are present in the Curry device.
- (3) Applicant argues that the device of Curry is not "minimally invasive". The argument is not persuasive because first, the term minimally invasive does not provide any structural definition to the claimed device, and second the device of Curry would have been fully capable of in vitro use. The intended or disclosed use of the prior art device is not germane to the issue of patentability of the device itself.
- (4) Applicant argues that neither Curry nor Pugh contains any suggestion to combine. However, the motivation by which one of ordinary skill in the art would have recognized the combined disclosures is fully detailed in the grounds of rejection.
- (5) Applicant argues the instant invention exhibits an unexpected result not achieved by the prior art device. However, any claim of unexpected results can only be established by declaration, including evidence. Mere allegation of unexpected results

Art Unit: 1743

are obtained by the instant invention, or unattained by the prior art, are insufficient to defeat obviousness.

- (6) Applicant argues that the term "disposable" should be allowed in the claims. No objection has been made with respect to the use of the term "disposable" in the claims. However, the term does not define over the prior art because virtually any article of manufactured can be classified as disposable.
- (7) Applicant finally argues that the sensor of Curry requires the chemicals to be filled into a hollow tubing and enzymes must be immobilized in a BSA matrix using glutaraldehyde none of which steps are required by the instant invention. However, it is again noted that any additional elements or features of the Curry device are not precluded by the instant claims.
- 8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure as general background information.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeffrey R. Snay whose telephone number is (571) 272-1264. The examiner can normally be reached on Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill A. Warden can be reached on (571) 272-1267. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
